- Single playback of messages prepared beforehand
- An assistant for the preparation of reports
- Conservation of functions for example evacuation

Transport Company of capital Prague modernized old systems. Earlier solutions have been substandard and their maintenance has been increasingly demanding. A modern solution based on system **INFOS** allowed to build a transparent and open system. The system which also meets the most demanding requirements of the operator continually expanding network of a metropolitan subway. Another condition was that the individual locations have fulfilled the technical requirements for evacuation. Thanks to the system **INFOS** can the Transport company operate the station's radio and text information panels as a unified and centrally managed unit. The system also allowed **INFOS** and order very effectively increase the number of zones and the capacity of the entire system in terms of number of messages handled in parallel, frees the operator from the limits of connected technology offers users a convenient way to prepare, edit and intelligently plan messages and its distribution.
