

## Sieza Peridect+ has helped to reduce the number of thefts

P. Christensen is one of the country's oldest, largest and most innovative car dealers. The group has branches throughout the country and represents some of the most recognized car brands such as Mercedes-Benz, Smart, Peugeot, Citroën and Honda. PERIDECT+ protects one of the showrooms in Odensee. One of the key requirements was to reduce the number of thefts of automotive components such as precious metals from catalyts. The previous system based on thermal cameras and an electric fence was not reliable and had a large number of nuisance alarms. Other requirements were redundancy and integration with the existing camera system.

### Ticking the Boxes

- Ring redundancy
- Various types of fences support
- Integration with CCTV

Peridect+ is placed on a fence that combines chain link and welded fences. Thanks to the ability to set the sensitivity of each detector individually, Peridect+ successfully eliminates nuisance alarms caused by weather. Ring connection with one control unit and two line controllers (master/slave) is used for system back up in case of detection line interruption or a short circuit. With Onvif S support, IP cameras are automatically directed to the intrusion area, in case of an alarm. This two-step verification makes the installation very reliable and secure.

### Spec list

- 1x CUP+
- 8x LSP+

- 2x LCP+
- 199x DSP+

- 1x LAN IOP+ with extender
- 597m of perimeter
